Address all correspondence to: rbuell@tigr.org Clone 177013 is
from Solanum bulbocastanum chromosome 8. The orientation of the
sequence is from SP6 to T7 end of the clone. Genes were identified
by a combination of several methods: Gene prediction programs
including Genscan+ (Chris Burge,
http://CRR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky,
http://GR-081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky,
http://genemark.biology.gatech.edu/GeneMark/), and GeneSplicer
(Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org),
searches of the complete sequence against a peptide database and
the plant EST database at TIGR (http://www.tigr.org/tbb/tgi.shtml).
Annotated genes are named to indicate the level of evidence for
their annotation. Genes with similarity to other proteins are
named after the database hits. Genes without significant peptide
similarity but with EST similarity are named as unknown proteins.
Genes without protein or EST similarity, that are predicted by more
than two gene prediction programs over most of their length are
annotated as hypothetical proteins. Genes encoding tRNAs are
predicted by tRNAscan-SE (Sean Eddy,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel isolated nucleic acid molecule enc a plant disease resistance polypeptide. The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phytophthora infestans. The invention useful for conferring pathogen resistance in plants using a Solanum bulbocastanum late blight resistance gene. The present sequence is t bulbcastanum cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phytophthora infestans. The invention is useful for conferring pathogen resistance in plants using a Solanum bulbocastanum late blight resistance gene. The present sequence is the S

                                                                                                                                                      This invention relates to a novel isolated nucleic acid molecule encoding a plant disease resistance polypeptide. The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phytophthora infestans. The invention is useful for conferring pathogen resistance in plants using a Solanum bulbocastanum late blight resistance gene. The present sequence is that of a howartom.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 plant disease resistance polypeptide; solanaceous plant; potato; late blight disease; fungus; Phytophthora infestans; conferring pathogen resistance; gene; ds; transgenic; Ubi 3 prom
                                                                                                                                                                                                                                                                                                                                                                        New isolated Solanum bulbocastanum late blight resistance nucleic acid molecule encoding a plant disease resistance polypeptide, useful for conferring pathogen resistance to Phytophthora infestans in plants.

The preferred plant is a solanaceous plant that is potato. The resistance is to late blight disease, caused by the fungus Phytophthora infestans. The invention is useful for conferring pathogen resistance in plants using a Solanum bulbocastanum late blight resistance gene. The present sequence is the bulbcastanum Sbul 2 gene sequence which was used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Local Sim hes 2773;

New resistance gene conferring resistance against an oomycete pathogen, useful for producing plants, especially potatoes and tomatoes, resistan against oomycete pathogens such as Phytophthora infestans.

Example 5; SEQ ID NO 35; 86pp; English.

This invention relates to novel isolated polynucleotides that confer CC resistance against late blight caused by the comycete pathogen CC Phytophthora infestans, which threatens both tomato and potato crops. CC Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes CC elucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, CC and which cause disease resistance to bacteria, fungi, nematodes etc. CC These R genes, namely Rpi-blb, RGC1-blb, RG2-blb and RC2-blb, can be CC described as plant growth regulants. They are useful in providing CC resistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against oomycete infection or to demonstrate CC disease susceptibility. Resistance can be conferred by transformation of cexisting potato and tomato cultivars with the gene, a procedure that is more straightforward and faster than conventional introgression breeding. This polynucleotide sequence is the Solanum bulbocastanum Rpi-blb DNA of CC the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel DNA sequence in the field of plant disease, in particular comycete infections. The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an comycete infection caused by Phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an comycete infection such as late blight (a disease of major importance to production of Solanaceae such as potato and tomato cultivars). The present sequence is that of the S bulbocastanum Rpi-blb gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2913 BP;

CC This invention relates to novel isolated polynucleotides that confer CC resistance against late blight caused by the comycete pathogen CC Phytophthora infestans, which threatens both tomato and potato crops. CC Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes CC leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, CC and which cause disease resistance to bacteria, fungi, nematodes etc. These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be CC described as plant growth regulants. They are useful in providing CC resistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against comycete infection or to demonstrate CC disease susceptibility. Resistance can be conferred by transformation of castering potato and faster than conventional introgression breeding. CC Inis polynucleotide sequence is the Solanum bulbocastanum RGC3-blb coding CC DNA containing an intronic sequence in an exemplification of the

The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an composete infection caused by Phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an composete infection such as late blight (a disease of major importance to production of Solanaceae such as potato and tomato cultivars). The present sequence is that of the S bulbocastanum RGC3-blb gene which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 6; SEQ ID NO 52; 98pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to novel isolated polynucleotides that confer resistance against late blight caused by the comycete pathogen Phytophthora infestans, which threatens both tomato and potato crops. Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, and which cause disease resistance to bacteria, fungi, nematodes etc. These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be described as plant growth regulants. They are useful in providing resistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against comycete infection or to demonstrate disease susceptibility. Resistance can be conferred by transformation of existing potato and tomato cultivars with the gene, a procedure that is more straightforward and faster than conventional introgression breeding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New resistance gene conferring resistance against an oomycete pathogen, useful for producing plants, especially potatoes and tomatoes, resistan against comycete pathogens such as Phytophthora infestans.
                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3592 BP; 1129 A; 659 C; 734 G; 1070 T; 0 U; 0 Other;

                                             This invention relates to a novel DNA sequence in the field of plant disease, in particular comycete infections. The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an comycete infection caused by Phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an comycete infection such as late blight (a disease of major importance to production of Solanaceae such as potato and tomato cultivars). The present sequence is that of a fragment of the Sulbocastanum Rpi-blb protein which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 6; SEQ ID NO 50; 98pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated or recombinant Rpi-blb nucleic acids and proteins, useful for providing members of the Solanaceae family e.g. Solanaceae tuberosum with resistance against comycete infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  plant disease; oomycete infection; Phytophthora infestans; fungicide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
This invention relates to novel isolated polynucleotides that confer resistance against late blight caused by the comycete pathogen Phytophthora infestans, which threatens both tomato and potato crops. Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, and which cause disease resistance to bacteria, fungi, nematodes etc. These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be described as plant growth regulants. They are useful in providing resistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against comycete infection or to demonstrate disease susceptibility. Resistance can be conferred by transformation of existing potato and tomato cultivars with the gene, a procedure that is
                                                                                                                                                                                                                                                                                               New resistance gene conferring resistance against an oomycete pathogen, useful for producing plants, especially potatoes and tomatoes, resistan against oomycete pathogens such as Phytophthora infestans.
                                                                                                                                                                                                                                                                    Example 5;
                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2003-714439/68

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                more straightforward and faster than conventional introgression breeding. This polynucleotide sequence is the Solanum bulbocastanum BAC SPB4 genomic DNA fragment, present in RGC2-blb of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              426 AACAGGTTTTGTTTTGAATGAACCACAAGTTTATGGAAGAGACAAAGAAAAGGACGAGAT
